INOXDADI® BULLONERIA & FASTENERS

Barbata (BG), 23rd September 2026

SUBJECT

Regulation (UE) 2025/40 (PPWR) – Packaging and packaging waste

In view of the application of the Regulation (EU) 2025/40 in matter of packaging and packaging waste (PPWR), our Company has started an internal verification and adaptation process aimed at ascertaining the compliance of the packaging used within its business, taking into account both packaging from suppliers in the European Union and the ones originating from third countries.

The verification also covers the packaging materials used to package, handle, and ship our industrial products, such as cardboard boxes, labels, pallets, and stretch film.

Regarding these latter materials, in the context of the feedback received from our packaging suppliers, compliance with the overall limit of 100 mg/kg for lead, cadmium, mercury and hexavalent chromium, as required by applicable legislation, was declared.

As part of this process, we have requested our suppliers the information and documentation necessary to verify the compliance of the packaging with the applicable PPWR requirements, including, where required and applicable, the related EU declarations of conformity and the technical support documentation.

The collection and the verification of the documentation is currently in course, also considering that part of our supplies come from non-EU countries and that the packaging management methods may vary depending on the type of product and the related supply chain.

Once the collection and the verification of the information necessary is completed, we will be able to provide documentation and related evidence regarding the compliance of specific packaging with the applicable PPWR requirements.

Kind regards

INOXDADI Srl
